Lockable Security Telescopic Post Installation Instructions

Thank you for choosing an 'Ultra Secure' Security post.

Please read the following:-

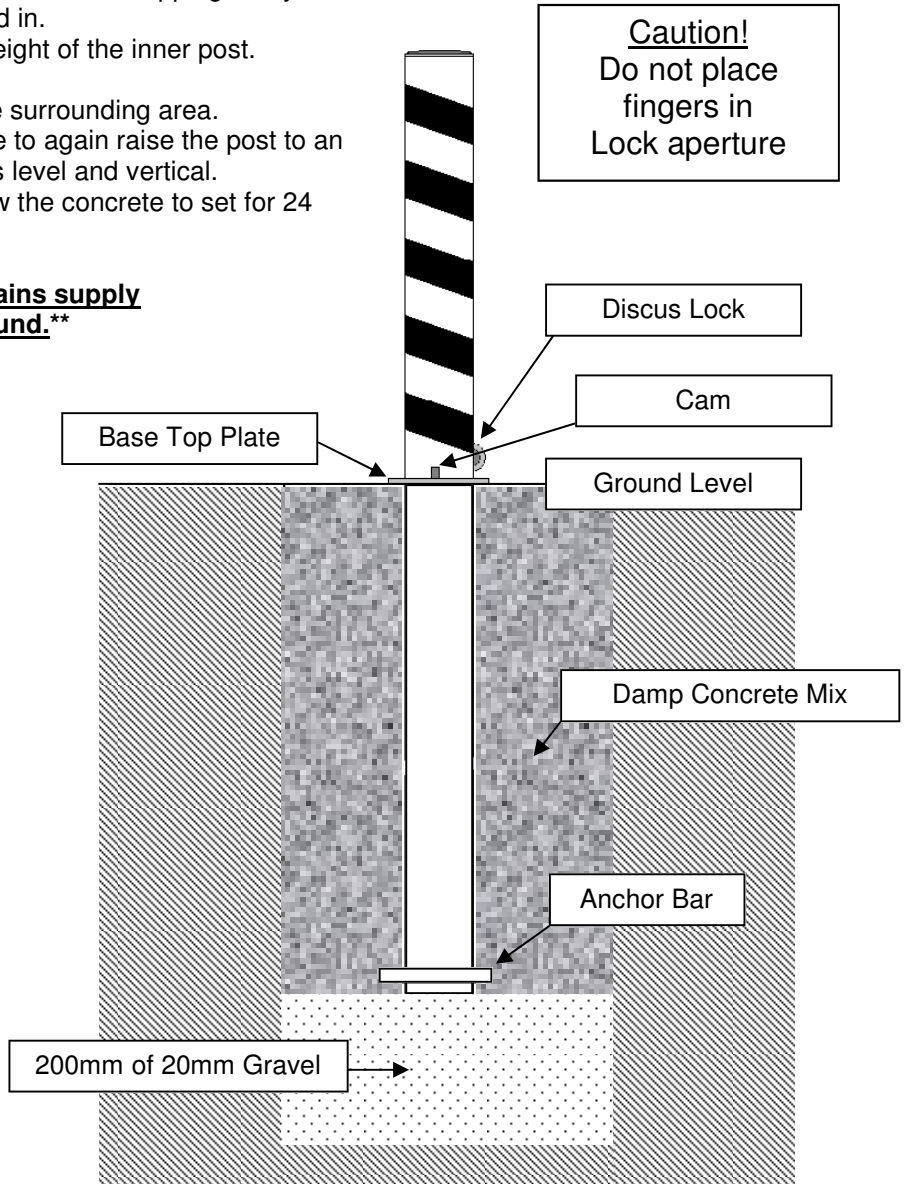

1. Select a site where you wish to place the post i.e. in front of a caravan, car, trailer, driveway, forecourt, garage door, etc.
2. Mark and dig out an area approximately 300mm square (slightly wider for the HD post) and 200mm deeper than your outer base sleeve.
3. Pour in the 20mm gravel to a depth of approx 200mm, placing your post centrally on top of the gravel making sure the top plate of the bottom sleeve is 3-5mm above ground level. Ensure post is upright.
4. Gently place a moist (not wet) mix down the sides tapping every 150mm until your post is fully concreted in.
5. Raise Post, the cam will support the weight of the inner post. Check post is level and vertical.
6. Finish around the post according to the surrounding area.
7. As the concrete is setting it is advisable to again raise the post to an upright position and recheck the post is level and vertical.
8. When satisfied lower the post and allow the concrete to set for 24 hours before using.

Tip:
 Don't Lose the Keys!
 Have another set cut and keep them safe. We are unable to provide replacement keys if lost.

Caution!
 Do not place fingers in Lock aperture

****Warning! – Always be aware of mains supply pipes when digging underground.****

Please Note:
 The anchor bar is an integral part of the installation
